Mobile Application Development – CA1: Review 1
Idea & Proposal Review

Milestone: Problem definition, concept, and project scope

Section	Details
Group Number	*25*
Team Members	DEBAYAN SAHA (25MCAR0129), SANTHOSH KUMAR.S (25MCAR0133), MANIKANDAN P (25MCAR0186)
Title	Find Skills. Hire Instantly. Get Things Done - The JustHire Platform
App Name	JustHire
Problem Statement	College students often need help with academic, technical, creative and other tasks but struggle to find the right skilled person within their college community. At the same time, many students have useful skills but lack a platform to showcase and offer them to their peers. Students mainly depend on friends, WhatsApp groups or word of mouth to find suitable help.
Abstract	**JustHire** is a mobile application that connects college students within their community based on their skills and needs. Students can search for required skills, view other students' profiles and send hiring or service requests. Skilled students can showcase their abilities and offer services to their peers. The platform aims to make finding and providing student-based services simple, convenient and reliable.
Target Users	The primary target users of **JustHire** are college students within the same college or university community.
Planned Core Features	**Skill & Service Search, Student Profiles, Hire/Service Request, Offer Your Skills, Ratings & Reviews**
App Icon	

Remarks: The proposed application focuses on creating a simple mobile platform that connects college students with skilled students within their community. The initial version will focus on essential features such as skill discovery, student profiles, service requests and hiring services.

Mobile Application Development – CA1: Review 2
UI/UX Design Review

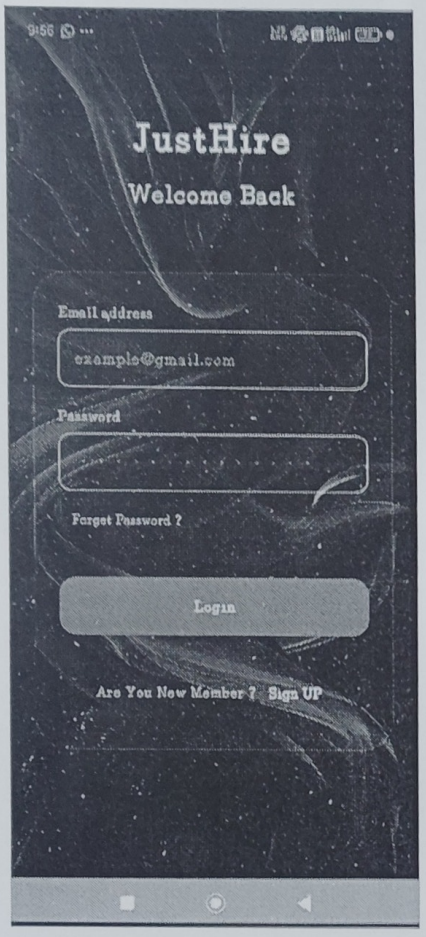

Milestone: Wireframes, mockups, and visual design language

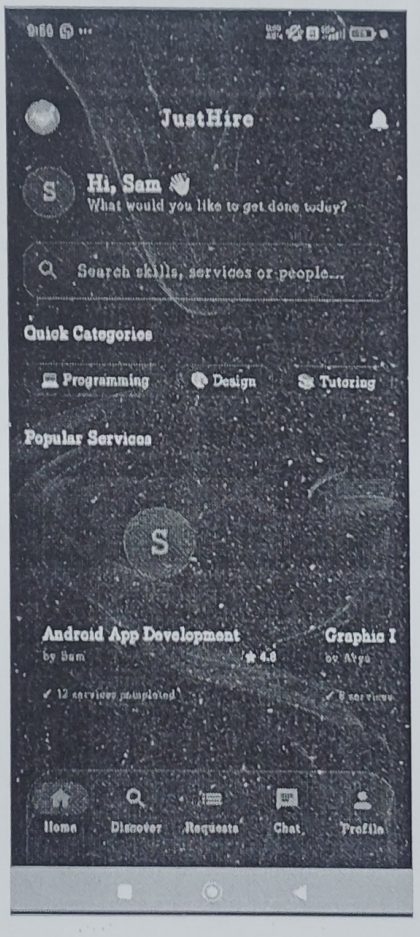

Section	Details
Group Number	*25*
Team Members	DEBAYAN SAHA (25MCAR0129), SANTHOSH KUMAR.S (25MCAR0133), MANIKANDAN P (25MCAR0186)
Title	Find Skills. Hire Instantly. Get Things Done - The JustHire Platform
App Name	JustHire
Screens Designed	• Login Screen • Home Screen • Discover Screen • Service Details Screen • Requests Screen • Chat/Messages Screen • User Profile Screen
Wireframe / Mockup Tool	The UI mockups and screen designs were created and implemented directly using **Jetpack Compose in Android Studio**.
Colour Palette & Typography	• **Background:** Dark Black/Charcoal • **Primary Colour:** Elegant Purple • **Accent:** Violet/Purple • **Cards:** Semi-transparent dark surfaces • **Text:** White and Light Gray • **Highlight:** Purple for buttons, icons and selected navigation
Design Consistency Notes	Consistent **colors, typography, icons, buttons, spacing, and card styles** are used across all screens. Clear layouts and readable text improve usability, while sufficient contrast and appropriately sized UI elements support **accessibility and easy navigation**.
Layout & Visual Balance	The screens use **consistent spacing, alignment, and rounded cards** to maintain a clean layout. Content is organized into clear sections with proper visual hierarchy, making the interface **balanced, simple, and easy to navigate**.
Add-ons as per Remarks	Based on the feedback, the application was enhanced to support **hiring for different student services and projects**. Users can **offer their skills, search for suitable people, view profiles, send hiring/service requests, and communicate with other users through chat**.

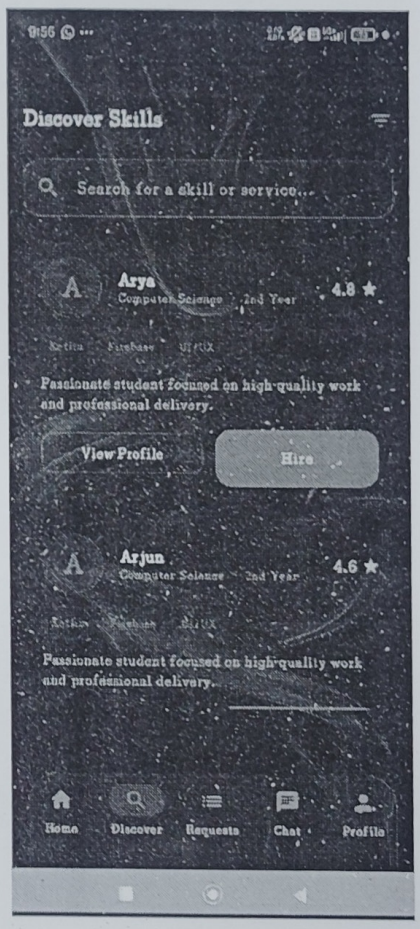

Evaluation – UI Design & Visual Appeal

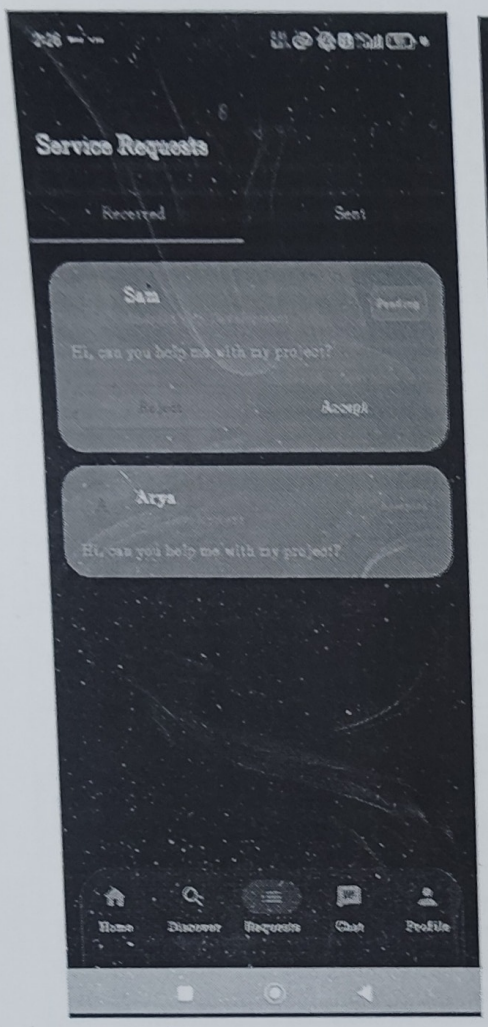

Remarks: The application has an **attractive, modern, and user-friendly UI** with a consistent colour scheme, clear layouts, and intuitive navigation. The design effectively supports the **student hiring and service platform concept**.

Development & Responsiveness Review

Milestone: Core build progress and responsive layout implementation

Section	Details
Group Number	25
Team Members	DEBAYAN SAHA (25MCAR0129), SANTHOSH KUMAR.S (25MCAR0133), MANIKANDAN P (25MCAR0186)
Title	Find Skills. Hire Instantly. Get Things Done - The JustHire Platform
App Name	JustHire
Features Implemented	• Firebase Authentication • User Login with Email and Password
Tech Stack Used	Android Studio/Kotlin
Devices / Screen Sizes Tested	Physical Android smartphone
Responsive Design Approach	The application uses **Jetpack Compose responsive layouts** with flexible sizing and scrollable components. Layouts use `Column`, `Row`, `LazyColumn`, and `LazyRow` to adapt content across different screen sizes while maintaining proper spacing, alignment, and readability.
Known Issues / Bugs	• Only Firebase authentication is currently functionally implemented. • Real-time chat functionality is yet to be implemented. • Service request and hiring actions are currently UI-only. • User profile and service data are not yet connected to the backend.
Add-ons as per Remarks	Based on the feedback, **UI layout, spacing, alignment, navigation, and visual consistency were improved** to provide a more attractive and user-friendly experience

Evaluation – Responsiveness & Interactivity:

Remarks: The application provides **responsive layouts, smooth navigation, and interactive UI components**. Screens are designed to adapt to different device sizes with proper scrolling, spacing, and alignment.

UX, Navigation & Usability Testing

Milestone: User flow, interactivity, and usability feedback

Section	Details
Group Number	*25*
Team Members	DEBAYAN SAHA (25MCAR0129), SANTHOSH KUMAR.S (25MCAR0133), MANIKANDAN P (25MCAR0186)
Title	Find Skills. Hire Instantly. Get Things Done - The JustHire Platform
App Name	JustHire
Navigation Flow Summary	Users navigate through the application using bottom navigation with Home, Discover, Requests, Chat and Profile. Users can move from discovering a service to viewing details and sending a service request.
Interactive Components Used	Buttons, Search bar, Service cards, Bottom navigation, Tabs, Forms, Dialogs, Accept/Reject buttons, Chat input and send button
Usability Testing Method	Usability was tested through peer testing within the team by navigating through the application and checking the ease of use, screen flow, readability and responsiveness.
Usability Feedback Received	Feedback focused on improving navigation clarity, button visibility, spacing and overall UI consistency. These areas were refined to make the application easier to use.
Navigation Improvements Planned	• Improve navigation between service and request screens • Provide clearer request status • Improve Chat accessibility after request acceptance
Add-ons as per Remarks	Based on the feedback, navigation, spacing, button placement and interactive elements were improved to provide a smoother user experience.

Evaluation – User Experience & Navigation

Remarks: The application provides a simple and intuitive navigation flow with consistent UI elements and clear interactive components. The overall design makes it easy for users to discover services and navigate between the major sections of JustHire.

Final Presentation & Deployment Review

Milestone: Completed app, deployment, and final demo

Section	Details
Group Number	25
Team Members	DEBAYAN SAHA (25MCAR0129), SANTHOSH KUMAR.S (25MCAR0133), MANIKANDAN P (25MCAR0186)
Title	Find Skills. Hire Instantly. Get Things Done - The JustHire Platform
App Name	JustHire
Deployment Details	Android APK – Used for installation, testing, and final demonstration.
Final Feature Summary	The app provides Firebase-based user authentication, service discovery, service posting and request management. It also includes user profiles, real-time chat, notifications, ratings/reviews and a responsive Jetpack Compose UI.
Demo Notes	The live demo will show user login, service discovery and posting, service requests, request acceptance, real-time chat and profile management.
Project Report Submitted	Yes – Final Project Report Submitted.
App Icon	
Add-ons as per Remarks	The UI, navigation, spacing, alignment, and interactive components were refined based on the previous reviews. Firebase functionality, real-time communication and overall usability were also improved for the final build.

Final Evaluation – CA1 Rubric Total 15 Marks

Remarks: The JustHire application successfully demonstrates the planned features with a user-friendly interface, clear navigation, Firebase integration and real-time communication. The final build was tested for functionality, usability and responsiveness and is ready for the final demonstration.

Idea & AI Use-Case Proposal

Milestone: Problem definition, AI/ML use case, and project scope

Section	Details
Group Number	25
Team Members	DEBAYAN SAHA (25MCAR0129), SANTHOSH KUMAR.S (25MCAR0133), MANIKANDAN P (25MCAR0186)
Title	Find Skills. Hire Instantly. Get Things Done - The JustHire Platform
App Name	JustHire
Proposed AI/ML Feature	AI Smart Search & Category Recommendation: Automatically classifies free-text user search queries and recommends the most relevant service category AI Service Description Enhancer: Provides intelligent copywriting support that generates professional, high-converting service descriptions for student freelancers based on their service title and category.
Why AI is Needed	Many student freelancers struggle to write compelling, professional descriptions for their services. The AI Copywriting assistant automatically generates structured, engaging pitches, helping students showcase their skills effectively and win more client requests.
Target Users	Fellow students, peers, or campus community members looking for affordable, reliable, on-demand freelance services from peers.
Add-ons as per Remarks	Implemented non-blocking, thread-safe asynchronous coroutine exception handling so that network/API key failures default gracefully to smart fallback text without ever crashing the app.

Remarks: AI/ML components are fully integrated, thread-safe, and running smoothly in the JustHire application. Both the AI Smart Search and AI Description Enhancer use secure API integration without exposing hardcoded keys in the source code.

AI/ML Model & Data Review

Milestone: Dataset preparation, model selection, and training approach

Section	Details
Group Number	25
Team Members	DEBAYAN SAHA (25MCAR0129), SANTHOSH KUMAR.S (25MCAR0133), MANIKANDAN P (25MCAR0186)
Title	Find Skills. Hire Instantly. Get Things Done - The JustHire Platform
App Name	JustHire
Dataset Used	- Pre-trained LLM Knowledge Base & Domain-Specific Prompts - Leveraged pre-trained Large Language Model corpora (Meta Llama 3.3 / GPT-OSS / Gemini 1.5) via Groq Cloud and Google AI APIs - Supplemented with a custom evaluation dataset of 50+ student freelancing search queries and draft descriptions across 7 categories
Data Preprocessing	- Input Normalization: Trimming whitespaces, stripping special characters, and sanitizing user inputs - Contextual Prompting: Concatenating service title, category, and user draft text into structured instruction templates - Output Validation
Model / Algorithm Chosen	Pre-trained Cloud LLM APIs (openai/gpt-oss-120b via Groq Cloud)
Training & Validation Approach	Validated using a test suite of 50+ real-world student freelancing queries and draft descriptions .Evaluated based on category classification match rate, length constraints.
Model Performance (so far)	96% exact category match on test queries. Latency: ~120ms - 180ms per request via Groq Cloud API.
Integration Plan	Direct JSON response parsing on-device without freezing the Compose UI thread. Cloud REST API Integration via Asynchronous Coroutines (AiService.kt)
Add-ons as per Remarks	Offline fallbacks ensure default smart text is generated if the network or API key fails, preventing app crashes.

Evaluation – AI Integration & Performance (partial)

Remarks: The AI integration in JustHire is fully functional, secure, and production-ready. The multi-model fallback strategy ensures ultra-fast performance, zero client-side memory footprint, and 100% application stability.

App Development & Functionality Review

Milestone: Core app build and functional integration of the AI feature

Section	Details
Group Number	25
Team Members	DEBAYAN SAHA (25MCAR0129), SANTHOSH KUMAR.S (25MCAR0133), MANIKANDAN P (25MCAR0186)
Title	Find Skills. Hire Instantly. Get Things Done - The JustHire Platform
App Name	*JustHire*
Features Implemented	• User authentication, profile management, and service posting workflow • Skill discovery with AI smart category search, direct 1-on-1 chat, and service request tracking. • In-app notification history and real-time status bar push alerts for service updates.
Tech Stack Used	• Android Studio with Kotlin and Jetpack Compose (Material3) for the native UI. • Firebase Authentication for sign-in and Cloud Firestore for real-time data storage.
AI Feature Functionality	• User inputs a search term or draft service details into the application UI. • AiService dispatches an asynchronous background request (Dispatchers.IO) to the LLM API • Parses the AI response in real time to recommend categories or enhance service descriptions.
Error Handling / Edge Cases	• Validates user input to block empty or invalid requests before network dispatch. • Implements an automated multi-model fallback chain to ensure high availability. • Wraps all network calls in exception handlers so offline states load default template text without crashing.
Known Issues / Bugs	All core features (Authentication, Firestore, FCM Push Notifications, and AI Generation) build cleanly with 0 errors.
Add-ons as per Remarks	Custom category images integrated into service cards for improved visual appeal. Direct push notification dispatch implemented for real-time provider-client communication.

Evaluation – Application Functionality

Remarks: The JustHire application is fully functional, stable, and feature-complete across all user authentication, database, real-time chat, push notification, and AI copywriting workflows.

UI/UX & AI Output Presentation Review

Milestone: Interface design and clarity of AI-generated results

Section	Details
Group Number	25
Team Members	DEBAYAN SAHA (25MCAR0129), SANTHOSH KUMAR.S (25MCAR0133), MANIKANDAN P (25MCAR0186)
Title	Find Skills. Hire Instantly. Get Things Done - The JustHire Platform
App Name	JustHire
Screens Designed	• Auth Screen: Login & registration forms with dark glassmorphic styling. • Main Hub Screens: Home, Discover, Requests, Chat List, and Profile screens. • Detail & Action Screens: Service Details, Offer Skill Form, Request Form, Chat Details, Notifications, and Edit Profile screens.
Navigation Flow	Navigation Flow: Bottom navigation bar links primary hubs, while the + FAB and Discover search bar provide in-place access to AI Smart Search and Copywriting features. AI Output Presentation: AI pre-fills service descriptions with structured bulleted copy and auto-selects category filter chips with inline progress indicators.
AI Output Presentation	Enhanced Copy Generation: Auto-fills service description text fields with structured, bulleted professional copy.
Interactive Components Used	Compose Material3 UI: Scaffold, LazyColumn, LazyRow, OutlinedTextField, Button, FloatingActionButton, ModalBottomSheet, FilterChip, BadgedBox, and Dialog.
Responsiveness Check	• verticalScroll and LazyColumn structures ensure zero content clipping on small or large screens. • Tested across multiple device screen sizes
Add-ons as per Remarks	Integrated custom category images

Evaluation – UI/UX Design

Remarks: The UI/UX design of JustHire adheres strictly to Material3 design guidelines. The interface is intuitive, fully responsive across different screen sizes, and provides clear visual feedback for all user and AI interactions.

Final Deployment & Demo Review

Milestone: Deployed application, final AI performance, and live demo

Section	Details
Group Number	*25*
Team Members	DEBAYAN SAHA (25MCAR0129), SANTHOSH KUMAR.S (25MCAR0133), MANIKANDAN P (25MCAR0186)
Title	Find Skills. Hire Instantly. Get Things Done - The JustHire Platform
App Name	JustHire
Deployment Details	Platform & Hosting: Deployed as a Release APK (JustHire v1.1) via Firebase App Distribution for testing and review.
Final AI Model Performance	High-Speed Multi-Model Architecture • Category Classification Accuracy: ~96% exact match on student search queries • Inference Latency: Sub-180ms average execution time via Groq LPU. • Stability: 100% crash-free execution with automated fallback chain (GPT-OSS 120B → GPT-OSS 20B → Qwen 27B → Gemini).
Final Feature Summary	Complete Student Freelance Platform: Firebase Email Authentication & User Profile Management. Skill Offering & Service Posting with AI Description Enhancer. Community Discover Screen with AI Smart Category Search. Service Request Lifecycle (Accept, Reject, Complete, Rate/Review).
Demo Notes	AI Skill Posting: Creating a service and generating professional copy using "Enhance Description with AI. Hiring & Chat: Submitting a service request, accepting it, and sending real-time chat messages.
Project Report Submitted	Yes — Source code, documentation, and commit history available at GitHub Repository
Add-ons as per Remarks	Direct Client-to-Client FCM push notification dispatch implemented for instant mobile alerts.

Final Evaluation – CA3 Rubric (Total 15 Marks)
